

Amendments to the Claims:

This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of producing a polyamide nanocomposite from a partially crystalline polyamides polyamide and organically modified layered silicates in a double screw extruder having an intake,
wherein the method comprises the following steps:
 - (a) a first part of the polyamides ~~being~~ is dosed as a granulate into the extruder intake and melted,
 - (b) ~~and~~ the organically modified layered silicate being is dosed into the melt of the first part of the polyamide and admixed therewith, in a mixture ratio in the range of 60 to 80 wt.-% of polyamide and 40 to 20 wt.-% of layered silicates with the melt of the polyamides,
 - (c) ~~and then~~ a second part of the polyamide polyamides ~~being~~ is added to the melt mixture in the double screw extruder to set the final concentration of the organically modified layered silicate at no greater than 10 % in the melt of the polyamide nanocomposite, and
 - (d) ~~characterized in that~~ the resulting melt is subjected to filtration.

2. (Original) The method according to Claim 1, characterized in that the filtration of the melt is performed directly before the extruder nozzle.

3. (Original) The method according to Claim 1, characterized in that a melt filtration is performed during a separate extrusion procedure.

4. (Currently Amended) The method according to Claim 1, characterized in that wire filters having a mesh width of at most 200 μm , ~~preferably between 50 μm and 100 μm ,~~ are used to perform the melt filtration.

5. (Currently Amended) The method according to Claim ~~1~~ 4, characterized in that wire filters having a mesh width between 50 μm and 100 μm are used to perform the melt filtration. ~~with the addition of the organically modified layered silicate, a mixture ratio in the range of 60 to 80 weight percent of polyamides and 40-20 weight percent of layered silicates is produced and the second part of the polyamides is added to the mixture in the quantity necessary in order to achieve the final concentration of the layered~~

~~silicates of at most 10 weight percent in the melt of the
polyamide nanocomposite.~~

6. (Currently Amended) The method according to
Claim 5 1,

characterized in that, with the addition of the
organically modified layered silicate, a mixture ratio of 70
weight-percent of polyamides and 30 weight-percent of layered
silicates is produced and the second part of the polyamides is
added to the mixture in the quantity necessary in order to
achieve the final concentration of 2.5 to 6 weight-percent of
the layered silicates in the melt of the polyamide
nanocomposite.

7. (Previously Presented) The method according to
Claim 1,

characterized in that the layered silicates are
organically modified using phosphonium salts of the formula P-
R₄-X, R₄ representing three alkyl or aryl residues and X being
a Cl, Br, or I.

8. (Currently Amended) The method according to
Claim 1,

characterized in that the ~~exfoliated~~ organically modified layered silicates are exfoliated and have an ultrafine grain having an average particle size in at least one dimension of at most 100 nm.

9. (Previously Presented) The method according to Claim 1,

characterized in that the polyamides are selected from the group consisting of homopolyamides PA 6, PA 66, PA 46, PA 11 and PA 12.

10. (Previously Presented) The method according to Claim 1,

characterized in that the partially crystalline polyamides are admixed with a component of amorphous polyamide.

11. (Previously Presented) The method according to Claim 1,

characterized in that the organically modified layered silicates include phyllosilicates of the three-layer type (2:1).

12. (Withdrawn) An injection-molded part, which is produced using a polyamide nanocomposite obtained according to the method according to Claim 1,

characterized in that it has a surface which has an average roughness value (R_a) of less than $0.05\text{ }\mu\text{m}$ and/or has an average roughness depth (R_z) of less than $4\text{ }\mu\text{m}$.

13. (Withdrawn) The injection-molded part according to Claim 12,

characterized in that it includes a smooth surface having a high gloss produced by a molding tool polished to a high gloss.

14. (Withdrawn) A reflector for vehicle driving illuminators,

characterized in that it includes an injection molded part according to Claim 12 and is metallized directly.

15. (Withdrawn) A reflector for signal or street lights and/or a sub-reflector for vehicle driving illuminators,

characterized in that it includes an injection molded part according to Claim 12 and is metallized directly.

16. (Withdrawn) The reflector according to Claim
14,

characterized in that the metal coating is applied
through PVD methods.

17. (Currently Amended) A method of using a
polyamide nanocomposite molding compound produced according to
Claim 1, comprising injection molding said molding compound
into a reflector ~~into a~~ for vehicle driving illuminators.

18. (Previously Presented) A method of using a
polyamide nanocomposite molding compound produced according to
Claim 1, comprising injection molding said molding compound
into a reflector for signal or street lights or into a sub-
reflector for vehicle driving illuminators.

19. (Previously Presented) The method of Claim 17,
characterized in that a gas injection molding technique is
used during injection molding.

20. (Withdrawn) The reflector according to Claim
15,

characterized in that the metal coating is applied
through PVD methods.
